

Mead Helper App Help

This PDF is generated from the same help content used inside the app.

Mead Recipe

 Mead Recipe screenshot

Use this screen to calculate the main recipe numbers for a batch of mead.

- **Batch size:** the final volume you want to make.
- **Target final gravity:** the sweetness/body you want after fermentation and back-sweetening.
- **Target ABV:** the alcohol percentage you are aiming for.
- **Honey:** selected from your Honey Database.
- **Yeast:** selected from your Yeast Database.

The result box gives estimated starting gravity, Brix, honey required, water required, nutrients and back-sweetening honey.

Tip: Update the Honey Database first if you want the recipe cost and honey mass to match what you actually bought.

ABV Calculator

 ABV Calculator screenshot

Use this screen to estimate alcohol percentage from a starting gravity and final gravity reading.

1. Enter the original/starting gravity.
2. Enter the final gravity.
3. Press **Calculate ABV**.

This is useful when checking the actual strength of a finished batch.

Time Between Dates

 Time Between Dates screenshot

Use this screen to calculate the exact time between two dates and times.

It is useful for tracking fermentation age, nutrient addition timing, or how long a batch has been conditioning.

pH Adjustment

 pH Adjustment screenshot

Use this screen to estimate the amount of an acid or base needed to move from a starting pH to a desired pH.

The calculation is theoretical, so add chemicals in small steps and re-measure.

Important: Real musts are buffered, so the real-world amount may differ from the estimate.

Honey, Yeast and pH Databases

 Honey, Yeast and pH Databases screenshot

The database screens let you customise the ingredients and chemicals used by the calculators.

- **Honey Database:** stores sugar percentage, bottle price and bottle mass.
- **Yeast Database:** stores yeast name, nitrogen requirement, packet weight and packet cost.
- **pH Adjuster Database:** stores acids and bases used by the pH calculator.

Saved entries are stored locally in your browser using localStorage.

Saved Recipes

 Saved Recipes screenshot

Use this screen to view recipes you have saved from the Mead Recipe screen or added manually.

You can export individual recipes or all saved recipes as a PDF using the export buttons.
